Hidden Forest, The: The Biography Of An Ecosystem

Synopsis

Veteran science writer Jon Luoma uncovers the inner workings of an ancient forest, from the microscopic bugs in the soil to the giant trees.

Book Information

Paperback: 228 pages

Publisher: Oregon State University Press; Oregon State Univ PR ed. edition (April 1, 2006)

Language: English

ISBN-10: 087071094X

ISBN-13: 978-0870710940

Product Dimensions: 5.9 x 0.6 x 8.9 inches

Shipping Weight: 10.4 ounces (View shipping rates and policies)

Average Customer Review: 4.5 out of 5 stars [See all reviews](#) (15 customer reviews)

Best Sellers Rank: #455,723 in Books (See Top 100 in Books) #270 in [Books > Science & Math > Biological Sciences > Plants > Trees](#) #326 in [Books > Textbooks > Science & Mathematics > Biology & Life Sciences > Ecology](#) #1254 in [Books > Science & Math > Biological Sciences > Ecology](#)

Customer Reviews

Not only was *The Hidden Forest* a pleasure to read, but Jon Luoma told me so many things I didn't know. I thought I knew a great deal about forests, since I live next to a park, hike in the mountains, and have read many books about trees, but this book showed me that there really is a hidden forest right under my nose that I'd been mostly unaware of. Now, as I walk the trail through the woods, I think of the 16,000 tiny insects beneath my foot every time I take a step, and I think of the vital work they do that supports all life on Earth. Policy decisions are being made every day--just recently the Bush administration announced plans to increase logging of old growth forests--in a political and economic climate in which most people are ignorant of the science of forest ecosystems. How can we possibly make the right choices if people are not properly informed? For example, many people have bought into the notion that protecting old growth hurts the economy and costs jobs. In fact, the losses in the salmon industry, billions of dollars, could have been prevented if old growth forests had been protected. Also, millions if not billions of dollars of damage caused by flooding in Washington and Oregon could have been avoided if the Forest Service had followed the advice of the scientists at the Andrews Experimental Forest. Still, these scientists haven't even begun to scratch the surface of what we need to know about forest ecosystems. They haven't even identified half of the species

that live in our forests. How can we know the value of what we are losing if we don't even understand what it is or how it works? Their work should be funded at a much higher level. (Check out their web site: [...
